FOR YOUR BUSINESS

2024 Business Rebates

Rebates help implement efficiency

Today's business owners are looking for ways to control their costs and be more efficient. Adding high-efficiency improvements and technology can result in overall better business practices that can reduce expenses while growing your business. Connexus Energy offers many rebates on items you may already be thinking about. Contact us for more information on the rebate offers listed below and many other possible opportunities for your business.

Lighting

Connexus Energy offers rebates for the installation of energy-efficient lighting technologies. From helping you find the right light to meet your industry's standard, to putting you in touch with the right vendor, we're here to help.

HVAC

Our rebates help make it less expensive to purchase efficient equipment. Rebates are available for your HVAC equipment including ground source heat pumps, mini-split air source heat pumps, and cold climate air source heat pumps.

Custom Energy Incentives

For all other projects that don't fit into a defined rebate program, we can evaluate and provide a custom incentive based on the installation of new equipment. The new equipment must exceed the energy efficiency of existing, standard equipment or energy code.

Electric Vehicle Charging Rebates

We offer various commercial use electric vehicle charger rebates that help with the overall costs of purchasing and installing an electric vehicle (EV) charger or full charging station. These rebates require pre-approval, so let's get the conversation and planning started.

Variable Frequency/Variable Speed Drives and Compressors

Motors that meet the National Electrical Manufacturers Association's (NEMA) premium efficient motor standards can have significant savings when a variable speed/frequency (VFD/VSD) drive is added to the motor. Connexus has rebates available for VFD/VSDs.

Electric Forklift Rebates

If you are in need to upgrade or expand your forklift fleet, we have rebates for going electric! Stop worrying and smelling the propane in your warehouse, an electric forklift solves those issues and so much more! We also offer rebates on the chargers for electric forklifts as well.
