

Meet your renewable energy goals and support pollinators

Whether it's to gain a competitive edge in the supply chain or meet sustainability goals, Connexus Energy recognizes the need for innovative businesses like yours to be greener at a price you can afford.

NEW: POLLINATOR-FRIENDLY SOLAR RENEWABLE ENERGY CREDITS (S-RECS)

More than 15 million native and pollinator-friendly plants seasonally bloom and grow across 120 acres of Connexus solar farms. Independently verified by landscape managers and scientists at Monarch Joint Venture, Connexus' solar projects qualify as providing "exceptional habitat" on the Minnesota state standard for pollinator-friendly ground cover.

AN EASY WIN-WIN

Your business can be part of this important trend of making productive use of the land under and around solar arrays. Ask your key account representative how Connexus can certify your electricity with 100% pollinator-friendly S-RECs. Plus, you avoid the costs to install and maintain solar panels on your property.

HOW IT WORKS

Pollinator-friendly S-RECs are tracked by Connexus throughout the year then officially retired by our partner M-RETS, the nation's leading renewable environmental attribute tracking system.

SUPPLY IS LIMITED
